

February 15, 2007

Mayor and City Council City Hall 6 East 6th Street Lawrence, Kansas 66044

Honorable Mayor and City Council Members:

This letter presents a summary of the benefit-cost analysis performed for: API Foils, Inc.

Description of the Tax Abatement Model

The model is an analysis of the economic impact that a new or expanding firm would have on the community when a property tax abatement is requested by a company. In particular, the model examines the economic impact on the city, county, public school districts, and the state of Kansas.

From the perspective of the units of local government the benefits that are studied are as follows:

- Increases in local sales tax collections through company and employee spending;
- Additional franchise fees on utilities (gas, electric, cable TV);
- Increases in property taxes from new houses and company buildings;
- Increased state funding for any new school children.

Similarly, costs to local government include:

- Operational and capital costs to provide streets, public utilities, police and fire protection, and other public services for the company and new residents;
- Specific costs related to the new firm and borne by the city, if any (new roads, bridges, sewer services, etc);
- Expenditures related to the local school districts for education of the school children of the new company employees.

In addition the model considers the impact on the state of Kansas:

- Benefits including state-level sales and income tax collections;
- State-level costs for services such as education.

To account for total economic impacts, secondary (multiplier) effects of a new development are estimated through the use of income and employment multipliers.

However, it should be stressed that the model *does not* measure non-fiscal impacts on the community such as:

- Intangible costs (air and water pollution, traffic congestion, etc.);
- Intangible benefits (increased quality of life, social benefits of economic growth, etc.);
- External impact on the surrounding communities;
- The likelihood that the firm would locate even without the abatement.

To truly capture the total impact of a new firm on the community, these other issues must be accurately recognized and carefully considered. The fiscal impact results presented here should only be *part* of the information used when deciding whether to grant an abatement.

The results are presented in terms of net benefits; that is, benefits minus costs. To provide a fuller understanding of the influence of the proposed tax abatement on different government units, the net benefit amount is calculated separately for the city of Lawrence, Douglas County, USD 497, and again as the total net-benefit of all three.

Summary of the Cost-Benefit Analysis for API Foils, Inc.

API Foils, Inc. is a manufacturer of decorative foils for use in hot and cold stamping applications. The company was formed in 1998 as a result of a merger of Dri Print Foils and Astor Universal. Astor Universal was started in 1995 at the East Hills Business Park. API Foils, Inc. currently employs 65 people in its Lawrence, Kansas facility. The company is looking to increase their manufacturing capacity in the U.S. to reduce dependency on affiliates and third party as well as provide for future growth. They are interested in an addition to their existing building on Greenway Circle in East Hills for expanded manufacturing and warehousing capacity. The expansion of their existing building would be 60,000 square feet in area; it will require no additional land purchase. The value of the building expansion is estimated to be \$4 to \$5 million (\$4.5 million is used for the purpose of the cost-benefit analysis). Furthermore, it is estimated that \$11 million worth of equipment would be purchased and installed over a period of three years (\$3.0 million in Year 1, \$5.5 million in Year 2, and \$2.5 million in Year 3). The completion date for the expansion is June 2010. API Foils, Inc. plans to hire 31 new employees (4 employees in Year 1, 6 employees in Year 2, and 21 employees in Year 3) in conjunction with their expansion plans. Salaries for these new employees range from \$30,000 to \$80,000, with the average being \$42,500.

The requested abatement is 55 percent for ten years on \$4,500,000 of real estate. *Effective* January 1, 2007, machinery and equipment acquired by qualified purchase or lease made or entered into after June 30, 2006 is exempt from property taxation in Kansas. Therefore, the \$11,000,000 investment in equipment is exempt from property taxation and is not part of the cost-benefit analysis.

Below are the fiscal impacts of the company's proposed project for the city of Lawrence, Douglas County, the Lawrence School District (497), and the combined total, assuming the abatement request is granted. The benefits are given as cumulative amounts for ten and fifteen years after the company expands. The benefit/cost ratios are also listed.

	<u>Year</u>	· <u>10</u>	<u>Year 15</u>		
	Net Benefits	B/C Ratio	Net Benefits	B/C Ratio	
City of Lawrence	\$1,191,536	9.00 to 1	\$1,604,239	9.52 to 1	
Douglas County	\$136,457	2.83 to 1	\$221,044	3.34 to 1	
USD 497	\$118,230	3.29 to 1	\$206,064	4.25 to 1	
Combined City, Co., USD497	\$1,446,223	6.26 to 1	\$2,031,346	6.86 to 1	

The impact on the state of Kansas has also been approximated, using three sources of revenue (income, property, and sales taxes) and the one significant area of expense: education. The approximate net benefit after fifteen years to the state is \$2,773,538.

Another way to view benefits is to look at how many jobs are created and the amount of disposable income that accrues to the firm's workers (wages and salaries plus benefits less taxes). In addition to these 'primary' effects, economic theory predicts there will also be 'secondary' effects, or spillovers, in the local community. Increased money circulation in the local economy as a direct result of plant and employee spending has been shown to create additional jobs and income. The summary of the direct effects and an estimate of the secondary effects resulting from the firm's activities for all of Douglas County are listed below.

	Disposable Income	Employment
Primary Effects	\$748,646	24
Secondary Effects	\$195,941	14
Total	\$944,588	38

Hopefully this analysis will be helpful to you in your decision making. We encourage you to call us at (785) 864-3701 if you have any questions or suggestions of ways in which this report might be made more useful to you. A complete report on the benefit-cost analysis accompanies this letter.

Sincerely,

Genna Hurd

Cost-Benefit Analysis of the Fiscal and Economic Impact of a New or Expanding Firm Requesting Tax Abatements

Name of Firm: **API Foils, Inc.** Type of Project: Expansion

Nature of Business: Manufacturing

Abatement Request: 100% for 10 years on new equipment

55% for 10 years on new real estate

Date of Analysis: February 15, 2007

prepared by:

Genna Hurd Research Associate

Cost-Benefit Analysis for API

Introduction

This report summarizes the results of a benefit-cost analysis for API Foils, Inc. The analysis is based on the Fiscal and Economic Impact Model of the Institute for Policy & Social Research at the University of Kansas, as customized for the city of Lawrence.

Main Results

1. Applicant's New Investment

The applicant proposes a total investment of \$15.5 million in real estate and equipment. The firm also anticipates the creation of additional annual operating expenditures totaling \$7,126,000, of which \$145,775 (2 percent) is spent locally.

2. Amount of Abatement Requested

API Foils, Inc. is requesting a 55 percent abatement for ten years on all new real estate purchased. The real estate value of the business expansion is estimated to be \$4.5 million. *Effective* January 1, 2007, machinery and equipment acquired by qualified purchase or lease made or entered into after June 30, 2006 is exempt from property taxation in Kansas.* Therefore, the \$11 million in equipment investment is already exempt and not part of the abatement requested. The present value for the city, county and school district combined of the abated tax and discounted over a 10-year period is \$429,974. An additional \$98,162 is abated over the 10-year period by the state (Table 1).

3. Net Benefits over a 15-Year Period

Over a 15-year time span, the present value of net benefits to the city of Lawrence amounts to \$1,604,239, given the abatements requested by API Foils, Inc. The respective results are \$221,044 for Douglas County and \$206,064 for the Lawrence school district. The combined benefit for the city, county, and school district is \$2,031,346 if an abatement is granted. If *no* tax abatement is granted the present value of the net benefits would increase to \$1,724,581 for the city of Lawrence, \$358,074 for Douglas County, \$378,665 for USD 497, and \$2,461,320 for all three combined. These figures are shown in Table 4. For more detail, the Appendix shows cumulative net benefits for each of the 15 years (A-4).

4. New Employment and Jobs Provided

API Foils, Inc. plans to hire 31 new employees in conjunction with their expansion plans – 4 employees in the first year, 6 in the second year, and 21 in the third year. The average pay of all employees is \$34,032. In addition, the firm provides an average of 24 percent fringe benefits for all employees.

^{*} HB 06-2583, Commercial/Industrial Machinery and Equipment Exemption, 2007 Personal Property Tax Summary, www.ksrevenue.org/pvd.htm.

5. Private Sector Income and Sales Associated with New Development

Table 5 shows that new total annual disposable income is estimated to be \$785,804 for Lawrence. Disposable income is salaries plus benefits minus income and other taxes. This figure includes disposable income to all employees of the firm as well as disposable income created through the multiplier effect. Local sales in Lawrence from the firm's purchases and from household expenditures amount to \$273,933. Of this amount, 17 percent, or \$46,226, is expected to be subject to local sales tax.

6. New Residents Associated with Development

After taking into account the employment multiplier effect, and estimating an average household size of 2.37 people for in-migrants, the project is expected to add 20 new residents to Douglas County.

7. New Schoolchildren Associated with Development

The model estimates not only the number of new schoolchildren associated with the firm, but also the number of new school kids expected to come from in-migrating secondary workers. The total number of new school kids enrolled in Lawrence public schools is estimated to be 3.

8. Multipliers

An income multiplier of 1.25 and an employment multiplier of 1.87 were calculated for this project. Every type of economic activity will have a different local multiplier effect depending on the characteristics of the incoming firm and employees.

9. Net Impact on the State of Kansas

In the first year, the state of Kansas will benefit from the proposed development through increased revenues in individual income taxes of \$6,660 a year. This includes income generated by secondary employment gains. The state will receive annual property taxes of \$11,636 when residential, plant and plant equipment taxes are added together. Sales tax collections on purchases and utility usage are estimated to total \$117,021 a year. Costs to the state are in the area of education, with basic state aid coming to \$2,971. The combination of these incomes and costs yields a net benefit of \$132,347 in the first year for the state. Over a fifteen year period, the present value of net benefits to the state of Kansas becomes \$2,773,538.

Reliability of Model Outcomes

The outcome of this cost-benefit analysis is intended to facilitate political decision making and does not represent precise values but reasonable approximations of the magnitude of the fiscal and economic impact of the project. The sensitive nature of the model to some variables such as the rate of in-migration associated with the new development suggests that one should view the results within a range rather than as a single outcome. Furthermore, the benefits and costs derived from this analysis do not include the intangible social costs or benefits, the benefits occurring during the construction phase of the project, or the costs associated with the chance that a firm might locate or expand in the community even without a tax abatement.

Conceptual limitations arise from the assumptions necessary for economic modeling. Empirical limitations of the input data may affect the reliability of the model's outcome. For example, this model does not allow for operating expense to vary over time. As new equipment is phased in, operating and utility expenses will change. The cost-benefit is also based on the most recent fiscal budgets and tax structures; city and county budgets are subject to change from year to year as are the property, income, and sales tax rates and franchise fees. For these reasons, it is stressed once again that the results of this model should not be used as the sole criterion in deciding whether a tax abatement should be granted, but rather, as one factor out of many involved in making such a decision.

Table 1

API Foils, Inc.

AMOUNT OF PROPERTY TAX ABATEMENT REQUESTED

55% for ten years on real estate

	Local				State	
Current mill levy	City 26.36	County 30.01	School District USD 497 37.80	Total	School 20.00	State Levy 1.50
