

MEMORANDUM
City of Lawrence
Central Maintenance Garage

TO: David L. Corliss, City Manager
FROM: Steve Stewart, Fleet Manager
CC: Chuck Soules, Director of Public Works
Tammy Bennett, Assistant Director of Public Works
Date: January 12, 2009
RE: Fuel Use Report

The purpose of this report is to show fuel prices paid, miles driven, fuel mileage averages, and to determine if idle reduction and reduction in miles driven efforts have been effective. The data reviewed indicate improvements in miles driven overall and increased fleet fuel mileage achieved by right-sizing vehicles. The Public Works Department currently has an anti-idling policy in place that would be appropriate to expand to other municipal operations. We also continue to investigate potential savings in fuel purchasing.

Fuel pricing:

This report only tracks fuel prices from 2004 to present. Prices prior to 2004 rose at a rate of approximately ten percent annually. Shown in the cost report beginning on page three diesel fuel price increases peaked in July, 2008, at \$4.32 (the highest rate we paid for one load). Since then prices have steadily dropped to \$2.11 (last load) - the same price we paid in February of 2007.

The gasoline price graph is on page eight and data on the following pages. Unleaded prices have plunged since their peak in June, 2008 (\$3.62 per gallon highest price for one load) to a level we paid in February of 2004 (\$2.11 per gallon last load).

Miles driven:

Reduction in total miles driven is charted on page thirteen. The chart on page fourteen is a breakdown of these mileages by department groups. In an attempt to make the chart manageable and readable we have grouped all of Police in one line, Solid Waste as one line, Street, Storm Water and Levee as one line. The remainder of Public Works is combined as is Recreation and Utilities. All lower mileage departments are grouped together. The supporting data on the pages following the charts are arranged in the same groups as appear on the chart of page fourteen.

It is hard to quantify mileage reduction solely based on fuel prices when factors like weather and emergency calls have to be figured in. I believe the charts and data show that departments have acted responsibly in changing their operations where they could. The reduction in miles driven was significant in 2006 as fuel prices began to rise and departments made adjustments. Mileage rose slightly in 2007 in part due to weather conditions. The 2008 numbers in this report are through November. The decrease in 2008 miles was 79,536 from 2007 and the lowest total miles driven since 2001.

The fuel mileage data portion of this report is based on APWA class of vehicles and begins on page eighteen. This report is limited to 2006 to current because I believe this to be the most pertinent data. It begins with front loader refuse followed by rear load refuse and then moves to all types of vehicles in the fleet. Many of these numbers are low, but when vehicle type and how they are used is considered none of them appear alarming. On the right of each section is the unit count for each class, this is the number of these vehicles we operate in the fleet. For mileage comparisons the best examples would be to look at full size sedans and pickups.

Fleet vehicle sizing:

The full size sedans shown in A42 are the same Crown Victoria models used in patrol but are being used as staff cars. Units in A42 and A42A are getting considerably better mileage than those operated in patrol A42P because of the type of operation. Detective units A42D fall in between patrol and staff.

The other significant comparison is in pickups. Where we have been able to downsize to ¼ ton trucks B11 and B12 we have increased the fuel mileage considerably over the ½ ton pickups B20-22. Although this not possible in all operations we should continue to downsize the trucks and move to cars wherever possible.

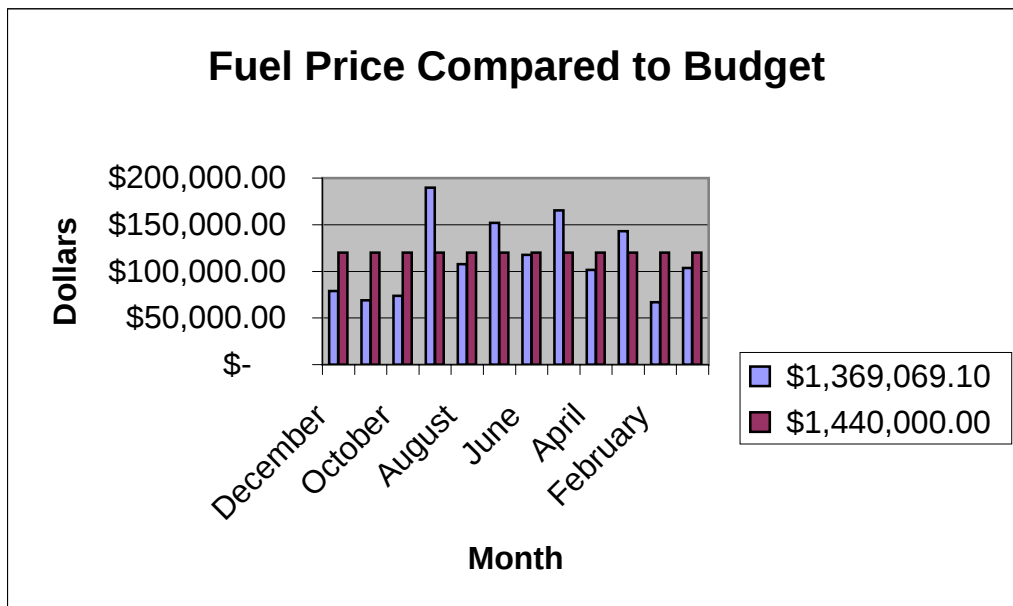

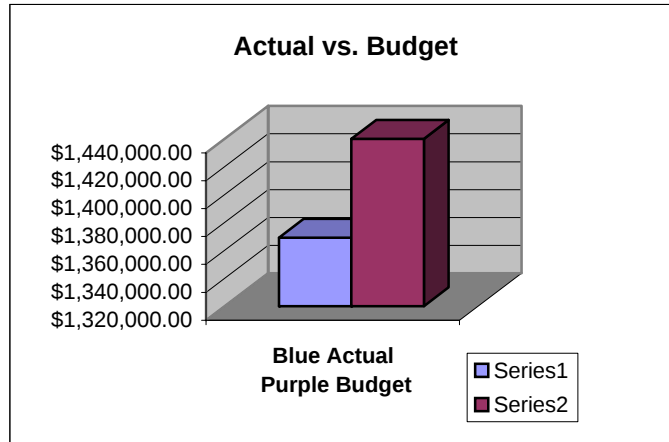

Fuel purchasing:

We currently bid each load of fuel we purchase. This system has kept us at or below state contract pricing. We continue to research potential benefits and pitfalls of “hedging” or participating in other multi-agency purchasing agreements. The 2008 fuel purchase price comparison to budget is included on page three.

To summarize this data, we have made progress in reducing miles driven even though the geographic size of the community has grown since 2001 and the fleet and operations have expanded. We have also made progress in increasing our fuel mileage by downsizing. City wide implementation of the idle reduction policy effective February 1, 2009 will have additional benefit of reducing fuel usage and lessening emission impacts on the environment.
