City of Lawrence

Sustainability Advisory Board (SAB)

June 10, 2009 (5:30 PM) Meeting Minutes

MEMBERS PRESENT:	Dickie Heckler, Sarah Hill-Nelson, Beth Johnson, Matt Lehrman, Daniel Poull, Laura Routh, Simran Sethi, Brian Sifton, Cindy Strecker
MEMBERS ABSENT:	Chris Cobb, Daniel Poull
STAFF PRESENT:	Tammy Bennett, Kathy Richardson, Bob Yoos
GUESTS PRESENT:	
PUBLIC PRESENT:	Michael Almon, Hillary Noonan

Call Meeting to Order (Sarah Hill-Nelson, Vice-Chairperson) Take Roll Call to Determine Quorum of Members

APPROVAL OF MEETING MINUTES

Introductions and welcome new SAB member, Beth Johnson from the Chamber of Commerce.

Motion and second to approve the May 13, 2009 minutes (Heckler/Lehrman). Vote: Motion was passed unanimously.

Staff Report on Recycling

The "Evaluation of Waste Diversion Strategies for Lawrence", a staff document, was emailed out to SAB for review (see attached).

Motion and second to table this issue until the July meeting (Heckler/Routh). SAB members agreed to postpone this discussion due to the short turn around time for the board to prepare questions and comments for staff.

Vote: Motion was passed unanimously.

Action: Add a recycling discussion item on next month's SAB agenda.

Environmental Chapter of Horizon 2020 Suggestions

Laura Routh informed SAB that the draft of the Environmental Chapter of Horizon 2020 has not yet been released for comment. Laura also mentioned that she completed a paper for her graduate course which covers indicators for sustainability as well as incentives for sustainable land use. Once the draft of the Environmental Chapter is released for comment, Laura plans to write a memo of recommendations for SAB to review.

Action: Laura Routh will email SAB and Charlie Sedlock her paper on indicators for sustainability and incentives for sustainable land use.

Kansas Open Meetings Act (KOMA) Follow Up

Matt Lehrman reported that he talked to Toni Wheeler, the City's Legal Services Director, about the possibility of the board being able to post messages on an open online forum (i.e. google group). Toni indicated that this does not comply with KOMA.

SAB members discussed the possibility of individually lobbying a legislator to modify KOMA. **Action:** Sarah Hill-Nelson, as an individual, will contact Paul Davis about putting forth legislation to make changes to KOMA in order to allow public online discussions.

There was also discussion regarding how the board can avoid being in violation of KOMA. SAB members agreed not to "Reply All" on emails, instead each board member may send his/her comments to the SAB Chairperson.

Letter of Thanks to the City Commission for Supporting the Hire of a Sustainability Director

Action: Cindy Strecker will write a thank you note to the City Commission for supporting the hire of a Sustainability Director.

Change Board Meeting Location? Bi-Weekly Luncheon in Between Meetings?

SAB discussed the possibility of changing the board meetings to a more central location than the City's SWAN Building at 320 NE Industrial Lane. The challenge with finding a new meeting place is that the advisory board meeting time and location should be regular and established. Many places like the Lawrence Public Library do not allow groups to reserve monthly meeting space for a full calendar year. Other building options might be: the City Hall commission room, the Health Department conference room, or County Courthouse commission room if the Sustainability Director is hired and becomes the staff liaison for SAB. Board members will continue to consider alternative locations.

SAB also discussed the possibility of having a bi-weekly luncheon in between meetings to address time sensitive issues/topics. There was agreement among board members that this extra meeting may not be necessary every month but instead may be called on periodically by the SAB Chairperson or decided at a previous Board Meeting. The meeting must be publicly announced via the City's calendar at least 48 hours prior to the meeting start time to comply with KOMA.

Motion and second to be prepared as board members to meet on an emergency basis so that there is a quorum present. The meeting will comply with all KOMA requirements (Heckler/Routh). Vote: Motion was passed unanimously.

Wetland Tour

Simran Sethi brought up the idea of having SAB sponsor a Baker Wetland tour. This community event would not only increase public awareness of the wetlands but would also achieve SAB's goal of increasing awareness of the advisory board. Some suggestions on who may be asked to lead the tour are: Joseph Collins, Kelly Kincher or Dan Wildcat. There was discussion on who would be invited, if there would be food, and other details that SAB may need to check on like mowing a path to reduce chiggers. Beth Johnson mentioned that Hank Booth is currently working with Baker University on a tour of the wetlands.

Action: Beth Johnson will discuss with the Chamber of Commerce the possibility of co-hosting a Baker Wetland tour with SAB. Beth will email Daniel Poull the information she finds out.

Bike Lane on 9th Street - Michael Almon

Michael Almon informed SAB about a proposal to create bike lanes on 9th Street from Tennessee Street west to Mississippi Street – a total of four blocks. This issue has resurfaced again due to the City's planned maintenance on this portion of the street. In early July, the City's Bicycle Advisory Board and the Traffic Safety Commission will be reviewing the proposal of adding a bike lane if one side of street parking is eliminated. On July 7th, the City Commission will review the recommendations on the proposed bike lanes. Michael Almon asked SAB for the board's support on this 9th Street bike lane proposal.

Motion and second to have Matt Lehrman write a letter on behalf of SAB addressed jointly to the Traffic Safety Commission and the City Commission in support of the proposal of removing parking on the south side of 9th Street between Tennessee and Mississippi Streets in order to facilitate the implementation of a bike lane (Hill-Nelson/Heckler).

Vote: Motion was passed unanimously.

Action: Matt Lehrman will email the draft letter to SAB and edits may be sent directly to him.

Conversation in a Box - Hillary Noonan

Hillary Noonan presented information regarding the Conversation in a Box project started by the Mid America Regional Council (MARC) and implemented as a way to receive input on sustainability. A Conversation in a Box is a small discussion group led by a facilitator. The attendees are asked to review and rank the 13 strategies to a sustainable future as developed by MARC. The conversation is tabulated and the paperwork is sent in to MARC.

Hillary Noonan asked for SAB's support in hosting 2 or 3 Conversation in the Box sessions in Lawrence. Hillary has volunteered to be the facilitator and will provide a one page announcement which SAB can distribute to their contact list.

Motion and second to support the Conversation in a Box project and pursue collaboration with Hillary Noonan (Routh/Heckler).

Vote: Motion was passed unanimously.

Action: Kathy Richardson will post the Conversation in the Box invitation on the City's website.

Waste Reduction & Recycling Report

The WRR report was emailed to SAB yesterday (see attached). Kathy Richardson highlighted the following: 1. Tonnage recycled so far this year through the City program is equal to the tonnage collected at this time last year but the revenue decreased \$87,000, and 2. The City will collect woody debris on Mondays only if it is in carts, cans or compostable paper yard waste bags (no bundles accepted on Mondays, any bundles will be picked on trash day).

The participant survey summary from the Earth Day Celebration was emailed to SAB (see attached). The survey responses were all positive.

Kathy Richardson also informed SAB that the City Manager agreed to purchase a refurbished baler for the use of the Wal-Mart Community Recycling Center. This will be an action item to be approved on the City Commission consent agenda next week. In addition, staff has received information that Wal-Mart is planning to reduce the hours at their recycling center and possibly close the center on Tuesdays.

The Lawrence Energy Conservation Fair is scheduled for Saturday, September 12, 2009 from 10 am to 4 pm at the Lawrence Community Building located at 115 W 11th Street. Kathy Richardson informed SAB that planning for this event has already begun. Staff will be hosting a lunch planning meeting at noon next Wednesday, June 17th at the City's SWAN Building. SAB members are invited to attend this planning meeting to discuss suggestions for this year's event.

Staff also wanted SAB to be aware that the Lawrence Journal World is publishing a Green Section that will run tomorrow, June 11th. Kathy Richardson announced that there will be a few articles on recycling, composting and solid waste. City staff was interviewed for these articles.

Guest comments and miscellaneous

Brian Sifton announced that he wrote a letter as an individual in response to the Lawrence Journal World's article "City Won't Mess with Recycling Success" but his letter did not run.

Sarah Hill-Nelson asked if other board members saw the report on water quality testing in last month's City newsletter in the utility bill. There was a question on how to interpret the report results. SAB asked Tammy Bennett for a clarification on the report.

Action: Add the clarification of the water quality testing results to the July SAB meeting agenda.

Hillary Noonan announced that KCC send out information on stimulus money that will be given as no interest loans (up to \$10,000) for energy efficiency projects.

Action: Laura Routh will look into this on the KCC website and bring the information to the next board meeting.

Earlier in the week, Laura Routh sent out an email (as an individual, not as SAB) to the City Commission stating she supported an audit of the Solid Waste Division business services. Laura informed SAB that Commissioner Mike Dever will be in touch with her and she will bring any additional information to the July meeting. She referenced in her email the Douglas/Jefferson Counties 5-Year Solid Waste Management Plan which she brought a copy to the meeting.

ACTION: Staff will scan the 5-Year Solid Waste Management Plan and email it to SAB.

Simran Sethi announced an Urban Farm Tour to take place on June 28th in Kansas City.

Meeting adjourned 7:30 p.m.

Next meeting: July 8th, 2009 at 5:30 pm

- Evaluation of Waste Diversion Strategies for Lawrence Report
- Waste Reduction and Recycling Division Report
- Earth Day Celebration Participant Survey Results

EVALUATION OF WASTE DIVERSION STRATEGIES FOR LAWRENCE 2009 UPDATE

Introduction

The city's Sustainability Advisory Board asked the Solid Waste Division in 2008 to commission a survey on recycling. Those results were reviewed by the City Commission. The City Commission and City Manager's Office requested an update of the waste diversion strategies and costs presented in 2004.

The Solid Waste Division looked at waste diversion strategies for Lawrence in 2004 and concluded in that report that the current recycling strategy should be continued and expanded on. Recycling opportunities, both public and private, had achieved a 34 percent recycling rate in 2003 which was believed to be the highest in the state and higher than typically achieved utilizing curbside collection of recyclables. Specific recommendations in the 2004 report were:

- 1. Support for a statewide beverage container deposit law ("bottle bill") which would remove glass, plastic and aluminum beverage containers from the waste stream:
- 2. Expand newspaper, cardboard and office paper recycling programs to additional entities (such as schools) and provide additional drop-off sites;
- 3. Increase recycling of wood waste at the city's compost facility; and
- 4. Increase public education on waste reduction.

Recycling Program Expansions Since 2003

Paper recycling through city programs has increased from 1,461 tons in 2003 to 2,111 tons in 2008. Two mixed paper drop-off sites were added to the city drop-off program in 2007 and five additional mixed paper sites were added in 2008. The total number of city-operated drop-off sites for paper increased to eleven in 2008.

Brushy waste and tree trimmings were added to yard waste collections in 2008 and are converted to compost or mulch.

Two electronics drop-off events were provided in 2008. More than 56 tons of electronics were diverted from the landfill by 1,189 participants.

Waste reduction has been a focus for educational events by city staff. The staff is a sponsor for the annual Earth Day event and has sponsored the Lawrence Energy Conservation Fair as well as attended numerous other events or organizational meetings.

A survey of Lawrence residents was commissioned in 2008 to gather input to help better understand the recycling needs of the community. Seventy-three percent (73%) of those surveyed indicate they currently recycle utilizing the mix of public and private recycling opportunities.

Evaluation of City-Operated Curbside Collection of Recyclables

Currently five privately operated businesses offer curbside collection of recyclables in Lawrence. Three of these have been in operation since 2003 or longer. A sixth has recently applied for registration to collect recyclables from the curbside in Lawrence. Residents can choose whether to subscribe to these services for a monthly fee. Several levels of services offered at varying price points (generally \$7-16 per month) are available from these businesses.

Recently the Sustainability Advisory Board requested an update on curbside collection of recyclables. The Board specifically wanted to see an evaluation of city-wide curbside collection provided by the Solid Waste Division or city-wide curbside collection provided by private providers.

Cost estimates were developed for providing curbside collection of recyclables utilizing city resources. Curbside collection could be provided primarily to 20,000-22,000 one to four-unit houses (out of approximately 37,800 total housing units). Larger complexes are typically served by containers (dumpsters) and not suitable for curbside collection. Some neighborhoods would not be able to receive curbside collection of recyclables because they too are served by containers (e.g. Oread Neighborhood) due to the high density of housing and parking needs.

Materials collected for recycling would likely be fibers (newspaper, mixed paper, etc.), steel and aluminum cans, and plastic (PETE, HDPE) containers. Staff does not recommend the curbside collection of glass due to negative markets and high cost of handling.

Cost

Two cost estimates were developed (see attachments) for curbside collection: one for a city-operated collection and operation of a Material Recovery Facility (MRF) for processing (sorting, baling, contaminant removal, loading onto transport trailers, etc.) and one for city-operated collection and direct daily transportation to the Deffenbuagh Industries Material Recovery Facility in Edwardsville, Kansas. That is the only MRF in the area. Estimates for both scenarios were developed for weekly or biweekly collection of recyclables (see table below).

COST COMPARISONS FOR CITY-OPERATED CURBSIDE COLLECTION OF RECYCLABLES

		City-operated M	<u>RF</u>	Transport to Edv	vardsville MRF
	Collection frequency:	Weekly	<u>Biweekly</u>	Weekly	<u>Biweekly</u>
Cost/year (d	over 7 years)	\$3,704,005	\$2,830,604	\$3,516,952	\$2,406,389
Cost/house	hold/year (1)	\$168	\$129	\$181	\$121
Cost/house	ehold/month	\$14.00	\$10.75	\$15.11	\$10.10

(1) City-Operated MRF: AVERAGE COST PER YEAR (attachment i) plus AVERAGE COST PER YEAR (attachment ii) divided by 22,000

Transport to Edwardsville: AVERAGE COST PER YEAR (attachment i) plus AVERAGE COST PER YEAR (attachment iii) divided by 22,000

Note: Typically fewer recyclables are collected with biweekly collection than with weekly collection

While the lowest cost estimate is for collecting recyclables biweekly and transporting the recyclables to Edwardsville, that alternative carries more uncertainty. Volatile fuel prices could increase that cost significantly as the miles driven per vehicle are more than doubled. Vehicles will have to be replaced more frequently due to higher mileage and increased wear and tear. More personnel and vehicles may be needed because a significant portion of the work day will be dedicated to driving to and from the MRF rather than collecting recyclables. Perhaps the greatest risk is that we would be dependent on a privately owned facility that may not always want our recyclables or may ask for payment for taking those recyclables. Since we would be delivering loose, unprocessed recyclables with a high possibility of contaminants in relatively small loads, the operators of the MRF may not find our material desirable, especially in a down market such as we are in now. The result would be that we have no market for our recyclables and would instead find ourselves with an accumulation of recyclables and likely discontinuing their collection. We would also receive much lower revenues due to delivering unprocessed, loose recyclables.

Benefit

The single greatest benefit would be that of convenience to the household but they would pay the monthly rate to receive that benefit. Currently, we estimate that 2,000-3,000 households choose to pay one of the five privately-operated collection businesses for the convenience of having their recyclables collected at the curbside.

It is important to remember, but often misunderstood, that a great deal of the material that would be collected with a curbside collection program is already being collected through existing programs in Lawrence. A curbside collection program would greatly reduce the

amount of material being collected at the Wal-Mart Community Recycling Center, the 12th and Haskell Recycling Center, by private curbside recycling businesses (they would be out of business), and through the city-operated drop-off facilities.

The actual increase in material recycled with a city-operated curbside collection program is likely to be less than 2,000 tons in addition to the 20,414 tons recycled in 2007. The additional tonnage would largely be paper that is not currently being recycled.

Contracted Curbside Collection of Recyclables to a Private Provider

The city could choose to put out a Request for Proposals (RFP) for a private provider for curbside collection services. A private company should provide turnkey services taking responsibility for collection, processing, marketing and also customer service responsibilities. There are several large companies within the region that have the capability of providing such services.

There are currently five privately owned small businesses that provide curbside collection of recyclables to customers that choose to subscribe to their services in Lawrence. These businesses utilize existing drop-off sites (Wal-Mart, 12th and Haskell Recycling Center, Lonnie's recycling, and city-operated drop-off sites) to deposit the recyclables they collect. It is staff's opinion that none of these small proprietors would have the resources to provide turnkey service to 22,000 households.

Staff also believes that if a program for curbside collection were to be pursued, the option of using a qualified private provider would be the preferred option. The provider would assume all costs and risks and the city would have a known cost depending on what was agreed on in a contract. It is likely that the costs would be lower than if the city operated the program because large recycling providers already have personnel, equipment, infrastructure, implementation experience and more leverage in recycled materials markets.

Issues and Concerns

Recycling Markets

Markets for recyclables, similar to the stock market, can be highly volatile. Currently recycling markets are at historic lows. For this reason, it is not good policy to develop programs expecting revenues for sales of recyclable materials to pay for the programs. In fact, some markets, glass for example, are negative meaning that one must pay to get rid of the material. Many communities have discontinued collection of glass. Mixed paper is also a dead market currently. Paper mills are not purchasing mixed paper at this time due to low demand for products.

Customer Satisfaction

It is difficult to predict what the level of customer satisfaction would be with different recycling scenarios. The 2008 Recycling Survey revealed that 72 percent of Lawrence citizens currently recycle which is a very high number. It also indicated that 59.6 percent of citizens would pay \$6.00 per month for curbside collection of recyclables. However, as the price went above \$6.00, willingness to pay went down. Only 45.2 percent were willing to pay \$9.00, 21.8 percent were willing to pay \$12.00 and 15.5 percent were willing to pay \$15.00.

The 2007 Citizen Survey indicated 86 percent of residents were satisfied with residential trash service which was termed a very high rating.

Variable Rate Pricing for Residential Trash

Variable rate pricing, commonly referred to as "pay-as you-throw" (PAYT) is used in many communities. Under PAYT, residents are usually charged by the number of cans or bags they set out for collection. PAYT is most common in communities faced with long hauls to the nearest disposal site or those with relatively little space left in the local landfill, both of which can create very high disposal costs.

Commercial collection rates in Lawrence are already under a variable rate system since the monthly fee is based on the size of dumpster and the frequency of collection for each customer. Those rates are set to include the cost of providing current recycling services to commercial entities.

Residential rates are the same for each ratepayer but they cover much more than the cost of trash disposal. They also pay for bulky item collection, tire collections, white goods collection and Freon recovery, residential recycling drop-off sites, the household hazardous waste facility, yard waste collection and composting, a portion of the electronics collection events, and waste reduction and public education and outreach efforts.

There is almost no direct correlation with the amount of material disposed of in the landfill and the monthly residential trash rate. In 2008, actual disposal fees were ten percent (10%) of the residential fee. The other 90 percent supported the personnel and equipment necessary to provide scheduled collection to each home, the above mentioned recycling programs, and overhead and administration costs.

Reliability of Analysis

The Solid Waste staff has confidence that the analysis options and estimates of costs contained in this report are reasonably reliable. However, detailed estimates for construction and real estate costs were not conducted. In addition fuel costs are predicted to be potentially highly volatile in the future. If curbside collection of recyclables or variable rate pricing options were to be considered further, we would recommend a third party analysis be provided by a professional solid waste consultant that would focus on the feasibility of curbside recycling and PAYT including, but not limited to:

- cost:
- benefits;
- and implementation.

Plans for Increased Waste Diversion

Source Reduction

The Solid Waste Division supports and encourages product stewardship to reduce materials in the waste stream such as a state-wide beverage container deposit law (bottle bill) which would create take-back programs that would remove beverage containers from the waste stream reducing collection, disposal and recycling costs, and reduce litter. Stores that will take back used electronics or other goods are other examples of product stewardship.

Public education and outreach programs have been put into place although funding was reduced in 2008 due to fiscal restraints. We hope to expand on these when possible.

Recycling

The Division is continuing the increase in paper recycling through city drop-off sites and commercial collection programs. Current market constraints have slowed the expansion.

Additional electronics collection events are planned for 2009.

Public education is seen as a key to increased recycling as more people become aware of existing recycling opportunities and the positive environmental benefits from recycling.

COMPOST PROGRAM

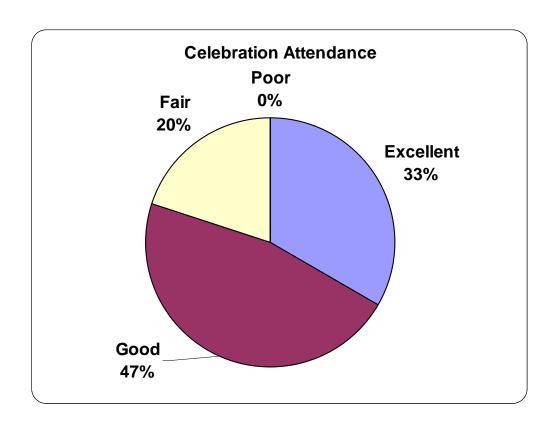

The new electronic gate at the Compost Facility is operational and working great. Sixty three (63) landscapers have signed up and were issued access fobs.

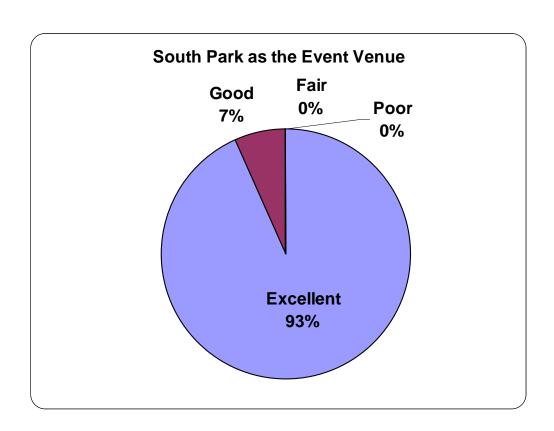

On June 1st, bundled brush is no longer accepted curbside for Monday yard waste collection. Brush will be allowed, but it must be in a cart, can or compostable paper yard waste bag.

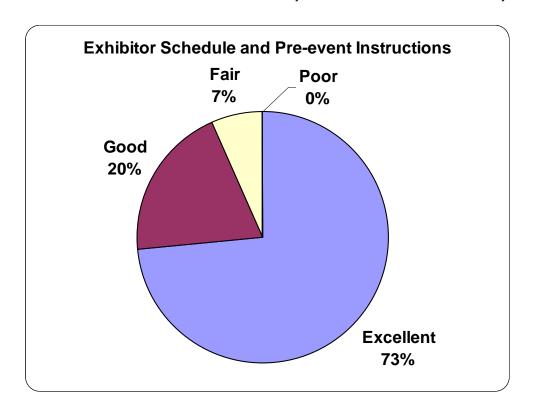

YARD TRIMMINGS COLLECTION: YEAR TO DATE

	January 2009	February 2009	March 2009	April 2009	May 2009
Total Tons collected curbside	NA	NA	1,210.53	1,013.77	1,138.74
Commercial YW received	1.9	17.1	176.2	164.8	193.2
Other YW received (Christmas Trees)	28.06 (2,245 trees)	NA	NA	NA	NA
Total tons this month	29.96	17.1	1,386.73	1,178.57	1,331.94
Average Preferred Container Compliance	NA	NA	98.9%	99.3%	99.5%

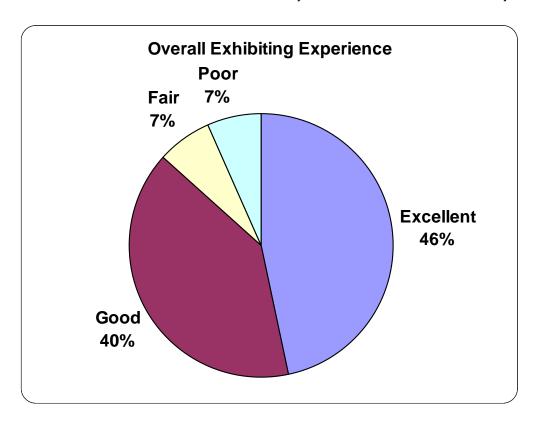

NOTE: The May numbers only account for 3 weeks because there was no collection on May 25th due to the Memorial Day holiday.

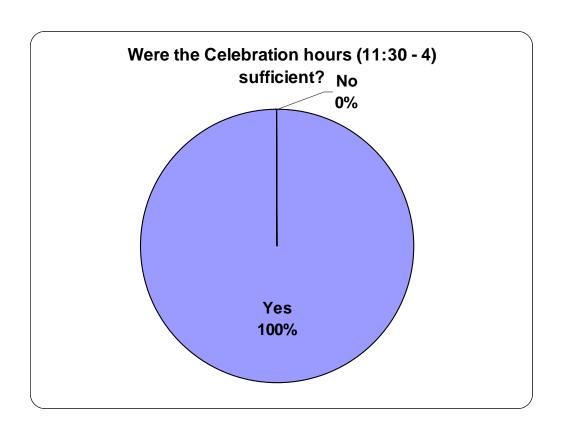

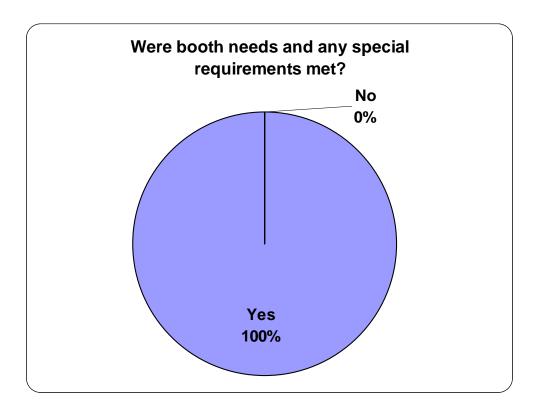

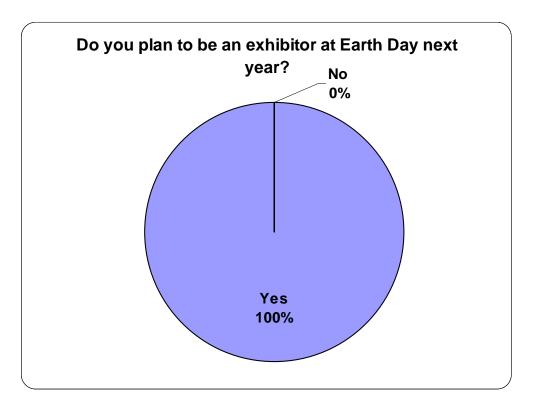

What were your primary reasons for exhibiting at Earth Day?

- To let people in the Lawrence area know about SMAG, it's involvement in community, it's children's art program utilizing readily available recycled supplies.
- To make event attendees aware of how our program helps them with the 3 Rs.
- Increase awareness; get our word out about gardening locally for good food.
- The SAB wanted a chance to speak with the citizens of Lawrence.
- To provide information about green movements and our organization.
- To show people how our company has an impact on the earth
- To publicize the existence of the Black Jack Battlefield and Nature Park.
- Educate community members about green options.
- Education and awareness for Audubon chapter and environmental issues.
- To gain more support for our proposed environmental charter school.
- Increasing awareness and education about vegetarian diets and the effect diet has on the environment; interacting with other eco-minded individuals

Suggestions

- Power it from renewable sources
- This was a great event and thank goodness the weather cooperated. Laura Calwell, Kansas Riverkeeper for Friends of the Kaw.
- This year's music was very good, BUT it was still almost too loud to talk to people with...it was distracting, very much at times. 2 of us moved our booth spaces because of water puddles and loudness of the area close to the east side of the gazebo....We would have never "made it" if we had not done so, as the sound was almost too loud there in the new place to the south also.. The free food by the Vegans was very very good, and added a lot of joy and community feeling to the whole event. Great Ground Crew!!! Everyone was so courteous and pleasant. Thank you for providing all the tables and chairs, it made it easier to do our booth!
- I'm not sure that we should have vendors, (besides the food vendors), actually selling items such as jewelry or plants at Earth Day. It would be fine for any nursery to advertise and talk with people about their product, but I wouldn't want to see this become a craft fair. Not sure what the parameters should be, but it's worth a discussion.
- Make bathrooms a little more accessible, and better supplied.
- Overall a very good experience. Many thanks to all of those who helped plan and execute the event!!

Suggestions cont.

- Music in the parade would be fantastic! Most parades start later in Lawrence, maybe have the parade at 1pm or maybe after the events at South Park??
- I would like to see more incentives about green living, including talks and other informational displays. I was disappointed that some 'green vendors' came only to 'sell stuff'....really this should be an educational event. If they want to sell plants and stuff....take it to the farmers market. The music was fun....but kind of loud.
