

Damage done to Locust, 2nd, Elm and 3rd Streets as a result of construction will need to be repaired. A street rating as well as video should be done immediately before project mobilization and after construction is complete (streets noted with red centerline).

Access to the site should be from Locust Street.
NO Access from 2nd Street will be allowed

Type III Barricade

Street and driveway to be kept clean during construction. All sediment and rock tracked onto street shall be cleaned immediately

Damage done to the laydown area road as a result from the construction will need to be repaired. Video should be done immediately before project mobilization and after construction is complete.

Designated Staging/Laydown Area

Absolutely NO vehicular access on River Levee.

Type III Barricade

Keep laydown area 10 feet from the edge of the recreation path. (Including possible perimeter fencing)

Maintain a 20' wide all weather access from Locust, through the staging area and to the construction site. In addition, the vertical clearance under the Kansas River Bridges must be at least 13'-6" and account for the approach & departure angles.

Exhibit A

License Agreement for Temporary Construction Access and Construction Staging
