

NEW PLAYGROUND SURFACES AT WATSON, EDGEWOOD PARKS

The playgrounds at Buford Watson Park and Edgewood Park received new additions recently. Both locations received new playground surfaces referred to as a “Poured in Place” surface and meets all ADA and playground safety requirements. This type of surface is created by placing drainage under the playground. On top of the drainage is a layer of a compacted aggregate base. The installer then places a two inch thick buffer on top of the aggregate followed by the final layer which creates the colored surface. The surface has a somewhat soft, bouncy feel as you walk on it. We anticipate many years of safe and fun use of these newly surfaced areas.
