# LAWRENCE TRANSIT STUDY

NUMBERICA TRANSING

THE UNIVERSITY OF KANSAS

# **Public Meetings**

36 KU OTH STREET

344

October, 2016

Mobility | Accessibility | Sustainability

- Transit has evolved very quickly in Lawrence
  - City-wide fixed-route service began in 2000
  - City and KU began coordinating service in 2009
  - Routes have been tweaked incrementally over the years
- Coordination efforts and restructuring of routes have led to ridership growth
  - 157% growth between 2008-2014
  - Ridership growth has helped demonstrate the value of transit to the community
- Time is right to take a comprehensive look at transit in Lawrence for the first time in 15 years
  - 10-year funding authorization expires in 2018

- Identify strengths and weaknesses of existing system
  - Review travel patterns
  - Assess system efficiency
  - Identify unmet transit needs
- Recommend service improvements
  - Serve existing riders better
  - Attract new riders
  - Improve over-all system productivity

- Service Should be Simple:
  - For people to use transit, service should be designed so that it is easy to use and intuitive to understand
  - Service Should Operate at Regular Intervals:
    - In general, people can easily remember repeating patterns, but have difficulty remembering irregular sequences.
  - Routes Should Operate Along a Direct Path:
    - The fewer directional changes a route makes, the easier it is to understand. Circuitous alignments are disorienting and difficult to remember.
  - Routes Should be Symmetrical:
    - Routes should operate along the same alignment in both directions to make it easy for riders to know how to get back to where they came from.
  - Routes Should Serve Well Defined Markets:
    - Routes should include strong anchors, and a mix of origins and destinations.
  - Service Should be Well Coordinated:
    - At major transfer locations, schedules should be coordinated to the greatest extent possible to minimize connection times for the predominant transfer flows.

#### THE UNIVERSITY OF KANSAS CITY OF LAWRENCE

Service Should Operate at Regular Intervals:

- In general, people can easily remember repeating patterns, but have difficulty remembering irregular sequences.

#### THE UNIVERSITY OF KANSAS CITY OF LAWRENCE

Routes Should Operate Along a Direct Path:

 The fewer directional changes a route makes, the easier it is to understand. Circuitous alignments are disorienting and difficult to remember.

- Routes Should Operate Along a Direct Path:
  - The fewer directional changes a route makes, the easier it is to understand.
    Circuitous alignments are disorienting and difficult to remember.

#### THE UNIVERSITY OF KANSAS CITY OF LAWRENCE

### Routes Should be Symmetrical:

 Routes should operate along the same alignment in both directions to make it easy for riders to know how to get back to where they came from.

- Routes Should be Symmetrical:
  - Routes should operate along the same alignment in both directions to make it easy for riders to know how to get back to where they came from.

- Routes Should Serve Well Defined Markets:
  - Routes should include strong anchors, and a mix of origins and destinations.

- Service Should be Well Coordinated:
  - At major transfer locations, schedules should be coordinated to the greatest extent possible to minimize connection times for the predominant transfer flows.

Service Should be Simple:

- For people to use transit, service should be designed so that it is easy to use and intuitive to understand

Service Should Operate at Regular Intervals:

- In general, people can easily remember repeating patterns, but have difficulty remembering irregular sequences.

Routes Should Operate Along a Direct Path:

- The fewer directional changes a route makes, the easier it is to understand. Circuitous alignments are disorienting and difficult to remember.

Routes Should be Symmetrical:

 Routes should operate along the same alignment in both directions to make it easy for riders to know how to get back to where they came from.

Routes Should Serve Well Defined Markets:

Routes should include strong anchors, but should avoid unintended service duplication.

Service Should be Well Coordinated:

 At major transfer locations, schedules should be coordinated to the greatest extent possible to minimize connection times for the predominant transfer flows.

### **Other Factors Considered**

- Market Analysis
  - Population and employment density
  - Population characteristics
  - Land-use and the built environment
  - Regional travel patterns
- Service Analysis
  - Ridership
  - Productivity
  - On-time Performance
- Stakeholder Input
  - Riders
  - Non-riders
  - Staff
  - Stakeholders

### **Market Analysis**

### Service Analysis

### **Stakeholder Input**

### **Service Scenarios**

- Approach:
  - Follow guiding principles
  - Incorporate technical findings and stakeholder input
  - Provide options

### Scenario 1: Lawrence Transit/KU on Wheels Proposed Schedule and Frequency

### Scenario 2: Lawrence Transit/KU on Wheels Proposed Schedule and Frequency

### Subsidized TNC Service

- Transit agencies are beginning to explore innovative ways to provide first/last mile connections in lower-density areas
- Flex service is a more cost-effective approach than fixed-route service, but it is still inherently inefficient
- Transportation Network Companies (TNC) such as Uber and Lyft have proven their ability to provide timely service at affordable prices in metro areas
- TNCs have recently begun partnering with public and private partners to facilitate subsidized service, making trip costs comparable to transit fares

### TRANSPORTATION ALTERNATIVE

PSTA is partnering with Uber and United Taxi to provide access to the public transit network in underserved areas. PSTA will pay half the fare, up to \$3 per ride to and from designated stops within the zone.

Wheelchair van service is available for those unable to ride in a sedan by calling 727-536-7433 x1 and asking for same-day PSTA service

## Subsidized TNC Service

- Case Study St. Petersburg, FL
  - Alternative Uber/taxi service to neighborhoods underserved by fixedroute transit
  - Transit agency pays half the Uber/taxi fare up to \$3 per ride between designated bus stops and the neighborhood service zone
  - Customers enter code in Uber app to receive subsidy OR call taxi provider to request a subsidized trip
