Residential Plot Plans

This information is made available to enhance construction uniformity and compliance with adopted construction codes, the Lawrence Land Development Code and construction permitting procedures. This document is intended to assist contractors and homeowners in understanding the minimum code requirements for residential projects. It is also intended to provide guidance for obtaining permits and inspections. The information provided should not be considered a complete list of code requirements.

Required documents*

- Plot Plan - Provide a plot plan of the existing and/or proposed structures for a new single family or duplex home, an addition or alteration to an existing home, or for construction or erection of an accessory structure.

*The information required may be submitted electronically or on minimum 8½ x 11 paper. 1/8” scale graph paper is included with this document.

STEP 1: Provide a plot plan, drawn to scale indicating the following information:

- **Street Address and/or legal description.**
- **Orient the lot with the north arrow indicated, preferably up.**
- **Provide a diagram of the lot and include lot dimensions.**
- **Label streets bounding the site.**
- **Easements.** Some properties have drainage, power, gas, cable, telephone or environmental easements that will limit what and where you can build a structure. Buildings are not allowed to be constructed in or over an easement.

*The above information is available on professional property survey documents that may be included with your closing papers or on the City of Lawrence interactive map.*

Plot Plans shall be drawn to a minimum scale of 1-inch equals 40 feet or 1-inch equals 20 feet (preferred). Sample plot plans have been provided showing the minimum information necessary on the plans.

- **Indicate all structures on the lot and provide dimensions of the structure** - Provide an outline of the existing and/or proposed structures. Specify the location and size of proposed construction with dimensions.

- **Building setback lines** - Houses and additions cannot be constructed on or over any portion of a minimum building setback. A minimum building setback is the minimum
distance from a property lot line (front, side and rear) that any building or structure
(including decks) must be located, or “set back”. Minimum building setbacks are governed
by the zoning of a lot, in accordance with the Lawrence Land Development Code and the
official zoning map of the City.

Accessory Structures in residential districts shall be located to the rear of the front building
line and may be located as close as 5’ to interior and rear lot lines. Setbacks from interior
side lot lines shall not apply to accessory buildings placed on lots that abut alleys. An
accessory structure may be located up to the rear property line when the lot abuts an alley
and when the doors to the building do not open directly onto the alley. There shall be no
setback required between an accessory structure and an alley when access to the structure
is parallel to the alley, except that no part of the structure shall overhang or otherwise
encroach onto the alley.

Zoning and setback information is available on the City’s interactive map. The Land
Development Codes Density and Dimensional Standards Chart for minimum setbacks is
copied below. Zoning and setback information may also be obtained by contacting the
Planning Department Planner of the Day (POD) at 785-832-3150.

- Indicate the property zoning on the plan.
- Distance from lot lines to proposed structure. - Provide dimensions to the construction
  from the front, rear and side property lines.
- Indicate the use of the structure with a building label.
- Provide a diagram of the existing or proposed driveway- Use City of Lawrence
  Driveway specifications for reference.
- Locations of window wells. A window well is allowed to project into the setback
  provided that they are setback at least 3 feet from all lot lines.
- A maximum building coverage and impervious cover is regulated by the city code
  Density and Dimensional Standards (see page 3). A document providing this lot information
  may be required. Use the format below to provide this information:

[2] First number represents minimum Exterior Side Setback when subject Lot is adjacent to an abutting interior Side Lot Line. Second number represents minimum Exterior Side Setback when subject Lot is adjacent to an abutting Rear Lot Line.
[3] First number represents minimum Rear Setback for Single Frontage Lot. Second number represents minimum Rear Setback for double Frontage (or through) Lot.
[4] Applies only to Lots platted after the Effective Date or any improvements on a property after the Effective Date which increase the Building coverage or impervious coverage.
[5] Additional Setback restrictions apply to properties developed adjacent to RS zoned properties where expressly required elsewhere in the Development Code.
[6] Density and Dimensional Standards for the RM12D District are the same as those for the RM12 District.
Typical Plot Plan – New Single-Family Residence or Building Addition

On angled property lines, the dimension “D” is measured perpendicular from the property line to the nearest point of the structure.

Indicate easements and building lines on your site plan.

D = Distance to property lines
Show deck location with respect to house, side and rear property lot lines.
